Not only do modeling and simulation help provide a better understanding of how real-world systems function, they also enable us to predict system behavior before a system is actually built and analyze systems accurately under varying operating conditions. Modeling and Simulation of Systems Using

MATLAB® and Simulink® provides comprehensive, state-of-the-art coverage of all the important aspects of modeling and simulating both physical and conceptual systems. Various real-life examples show how simulation plays a key role in understanding real-world systems. The author also explains how to effectively use MATLAB and Simulink software to successfully apply the modeling and simulation techniques presented. After introducing the underlying philosophy of systems, the book offers step-by-step procedures for modeling different types of systems using modeling techniques, such as the graph-theoretic approach, interpretive structural modeling, and system dynamics modeling. It then explores how simulation evolved from pre-computer days into the current science of today. The text also presents modern soft computing techniques, including artificial neural networks, fuzzy systems, and genetic algorithms, for modeling and simulating complex and nonlinear systems. The final chapter addresses discrete systems modeling. Preparing both undergraduate and graduate students for advanced modeling and simulation courses, this text helps them carry out effective simulation studies. In addition, graduate students should be able to comprehend and conduct simulation research after completing this book. Is Trump our contemporary Berlusconi? In 2015, Frank Bruni coined the term 'Trumpusconi' when

the media noticed some similarities between the then US presidential candidate Donald Trump and Italy's former Prime Minister Silvio Berlusconi. At that time, while many Italians joked about Trump as a déjà-vu, scholars began to analyse these two political 'outsiders' in an attempt to imagine Trump's probable presidency by studying Berlusconi's career. Regardless of any political view, it is against this background that this work analyses these two political figures through discourse analysis, to understand whether their similarities go beyond their personality traits and lifestyles. The work is divided into two sections: the first part provides some information on Berlusconi and Trump's socio-cultural origins and educational backgrounds, their first steps in their real-estate careers, their progression into the world of media and politics, and their relationships with women. The second part of the study proposes a discourse analysis performed on a corpus of speeches held by each politician at the beginning of their political career, in order to understand whether their personalities and lifestyles are reflected in their idiolects. The book partially confirms the media's ideas about the 'Trumpusconi' phenomenon, acknowledging some similarities between the two moguls. However, it also shows that Berlusconi and Trump belong to two different eras: even if Berlusconi's lifestyle, language, scandals, and politics

will continue to negatively and positively influence Italy for many years to come, the era of social media is leading the world towards models that differ from those of his time. Western politics is becoming ever more similar to a form of infotainment, and Trump is the perfect incarnation of this evolution. Only time will reveal his long-term legacy. This book constitutes the refereed proceedings of the 23rd Conference on Medical Image Understanding and Analysis, MIUA 2019, held in Liverpool, UK, in July 2019. The 43 full papers presented were carefully reviewed and selected from 70 submissions. There were organized in topical sections named: oncology and tumour imaging; lesion, wound and ulcer analysis; biostatistics; fetal imaging; enhancement and reconstruction; diagnosis, classification and treatment; vessel and nerve analysis; image registration; image segmentation; ophthalmic imaging; and posters.
